Issue Date  
**MAY 2003**

**Give this information to your customer for future reference.**

## PARTS LIST

2 Roof rack cross bars

2 Rubber strips

Position labels

2 Front brackets (marked 502)

2 Rear brackets (marked 453)

2 Rubber pads (marked 108)

2 Rubber pads (marked 106)

2 Keys

## TOOLS AND SUPPLIES REQUIRED

- Scissors
- Isopropyl alcohol
- Shop towel

## INSTALLATION

### NOTE:

- The weight of cargo must not exceed the maximum weight capacity of the roof, which is 88 lb (40 kg).
- Because of weight limits, only one bicycle can be carried on the roof rack.
- Be careful not to damage the roof and other finished surfaces of the body when installing the roof rack.

- On both ends of the crossbar, pull out on the knob to expose the end.

- Insert a rubber strip into the groove of the crossbar. Using scissors, cut off the excess rubber strip 5 mm away from the ends of the crossbar.
- Repeat steps 1 and 2 for the other crossbar.

- Adjust the distance between the two supports. Using the measurements on the crossbars, open the lock arm, and slide the supports in or out until the correct measurement is obtained. Close the lock arms to secure the crossbar supports.

Measurement	Driver's Side	Passenger's Side
Front	33	32.5
Rear	32.5	32

- Using isopropyl alcohol on a shop towel, thoroughly clean the edge of the crossbar support where the position label will attach.

- Using the measurement chart in step 4, identify each crossbar support location and attach the corresponding position label to the crossbar supports.

- Install the rubber pads onto the bottom of the crossbar supports. Each rubber pad has its own location. Use the chart below to install the rubber pads in the correct location. Make sure the pads fit properly on the supports.

Part	Driver's Side	Passenger's Side
Front	106	108
Rear	108	106

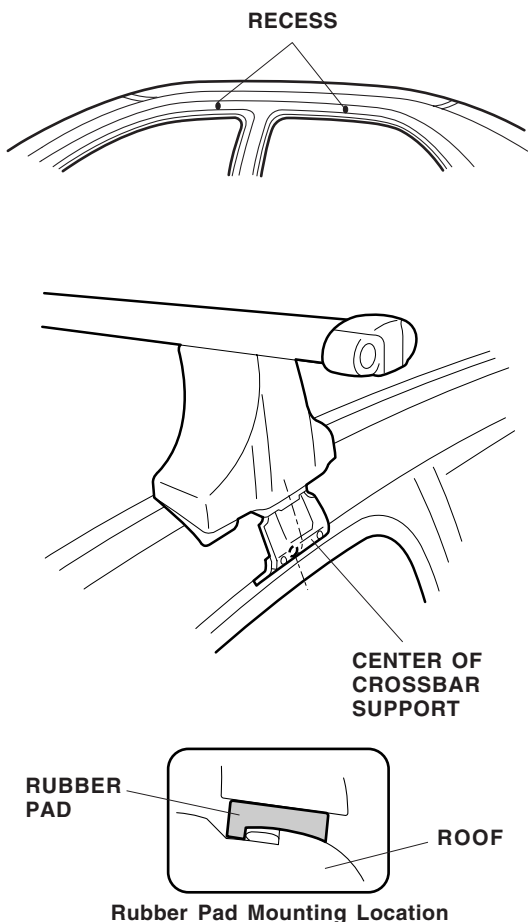

- Slide the front brackets (marked 502) into the front crossbar supports by aligning the holes in the brackets with the retaining tabs of the crossbar support. The bracket will "click" into position.
- Slide the rear brackets (marked 453) into the rear crossbar supports.

## Installing the Roof Rack on the Vehicle

10. Position the roof rack on the roof. On both sides of the car, align the center of the crossbar supports with the recess on the roof edge. Make sure the rubber pads match the contour of the roof.

11. While holding the bracket firmly against the roof, turn the right knob and left knob clockwise while alternating sides several times until the rack is secure. Make sure the brackets stay in place on the roof edges as you tighten the knobs.

12. After tightening the knobs, recheck the roof rack:

- There should be clearance between each bracket and the outer edge of the roof.
- There should **not** be clearance between the lower end of each bracket and the bottom edge of the roof.
- The rubber pads should make full contact with the roof.
- Rock the roof rack forward and backward to verify that it is installed securely on the roof.

13. Lock the end knobs by pushing in on the knobs until they "click" into position.

14. Use the keys supplied to lock and unlock the knobs, as needed. Put the keys in the glove box for your customer.
